

MOBILISE QUICKLY WITH PEAK RENTALS

Quick mobilisation, reduced CAPEX, increased flexibility, short and long-term rental packages – just a few of the many reasons to consider renting from Peak Well Systems. At Peak, we manufacture and maintain a large inventory of both standard and specialist tooling, specifically for clients that prefer to rent our advanced technologies.

We cater for all circumstances, whether it is an individual tool needed for a specific situation, or a complete and sometimes bespoke package of tools for longer term campaigns. At Peak, we realise that every project is different, every project throws up surprises and, more importantly, that every project is valuable.

We have rental tools available for almost every tubing size and with all connection types compatible with all industry quick connections, including the Peak QC (Peak Quick Connect) and Peak BC* (Peak Button Connect).

Our rentals are supplied with technical data manuals and redress kits to ensure that our equipment is easily deployed and maintained. Should you require support on site, we also have a team of specialist operational personnel who can work alongside your crew.

Peak tools that are typically rented out for campaigns include some of our most advanced SIM flow control technologies as well as standard utility tools.

- Flow Control - SIM System Bridge Plugs, Large Bore Gauge Hangers
- Heavy Duty Fishing Tools - Heavy Duty Pulling Tools, Spears, Adjustable Wire Finders
- Debris Removal Systems - High Temperature / High Strength Magnets, Bailers
- Toolstring - Compact Toolstring, Peak Power Jars
- Hi Deviation - Low friction rolling systems
- Utility Wireline Tools - Gauge Cutters, Lead Impression Block (LIB's)

A SUCCESSFUL FISHING CAMPAIGN

Take a look at some of the debris which Peak's 2 1/2" Pump Bailer recovered on a recent fishing operation in New Zealand. Bear in mind that some of these pieces are nearly 2" in length!

WELCOME

As demand for Peak products continues to grow around the world, we look ahead to exciting and busy times serving our industry. Our new brand identity, Peak Well Systems, was launched earlier this month and this now better reflects who we are and what we do. It also demonstrates our preparation and readiness for the development of our product portfolio to meet the well challenges of today. Whilst we still provide field services to ensure the operational success of our products, our main focus is in the continued development of industry leading technologies that will improve well performance.

Our range of high performance products, developed by some of the best designers in the world, have given our clients some notable advantages. By way of example, Peak has now successfully deployed by slickline over 600 retrievable bridge plugs from our SIM flow control range, saving our clients millions in the process.

As Peak continues to grow, our ongoing R&D programme ensures that we are bringing new products to the marketplace which meet our technology mantra of being SIMPLE, SAFE, ASSURED. Both standard and bespoke packages are available to purchase or, alternatively, you might want to consider our rental fleet, available from our rental outlets in Aberdeen and Perth (WA), as another means of benefiting from Peak products without increasing your capex.
